

Ahmed Bilal Shahid

MEAN / Angular / Flutter

+923011369402 • ahmedbilalmobile1@gmail.com • Lahore, Pakistan

Summary

Motivated Computer Science graduate with practical experience in full-stack web development using the MEAN stack. Built a complete laptop buying and selling platform with authentication, CRUD operations, and database integration. Strong problem-solving skills, solid understanding of backend logic, and eager to contribute to real-world development and security projects.

Skills

C++ Python Flutter Dart Node.js

HTML CSS JavaScript React.js Angular.js

Experience

Magnetar Solutions

Lahore

AI Automation Intern

12/2024-03/2025

- Completed an automation internship focused on workflow automation using Make.com, integrating various platforms to streamline business processes. Developed and tested automation.
- Scenarios to reduce manual tasks and improve operational efficiency. Collaborated with the team to identify automation.
- opportunities and implement solutions aligned with client needs.

Projects

Truck Dispatch Website (Angular.js)

- Front-end development for the truck dispatch company InfinityEdge.us
- Focused on creating a professional, responsive website to showcase services and facilitate client contact.

Lapmax Ecommerce Store (MEAN)

- Developed a full-stack e-commerce web application for buying and selling used laptops using MongoDB, Express.js, Angular, and Node.js.
- Built responsive frontend UI using Angular with modular components and routing.
- Implemented JWT-based authentication and authorization for secure user access.
- Designed MongoDB schemas for products, users, and transactions with proper data validation.
- Structured project with separate client and server architecture for scalability.

Habit Builder App Progressly (Flutter)

- Habit Builder is a productivity-focused mobile application developed using the Flutter framework. It is designed to help users cultivate and maintain positive habits by encouraging daily task completion.
- <https://github.com/Ahmed-beee/Progressly>

Ludo Project (C++ and SFML)

- A Ludo game project developed using SFML and C++ that reinforces core Object-Oriented Programming (OOP) concepts such as encapsulation, inheritance, and polymorphism.
- The project provides an interactive board game experience while demonstrating modular and scalable code architecture.
